

Cli-Mate Decoupling Membrane

The Cli-Mate decoupling membrane is a polyethylene membrane with rounded square studs that form channels specially designed to embed and fasten electric heating cables.

On the underside of the membrane there is a non-woven thermo-welded polyethylene fabric that ensures the membrane fixing is secure to the membrane.

The Cli-Mate Decoupling Membrane is a decoupling membrane of 5.5mm thickness that does not require expansion joints in the screed before laying ceramic and natural stone tiles.

Substrates that are suitable:

Concrete Floors, Timber Floors, Plywood Panels, Cement Screed, Anhydrite Screen, Green Screed & Tile Back Boards

BENEFITS

- Easy to Install
- Acts as a guard against movement in the sub floor
- 5.5mm thickness
- Available in two sizes: 5m and 15m rolls
